

## **HTODAY'S TASK**

- 1.Create a circular image upload preview with a border.
- 2.Make a button that toggles between 3 background colors.
- 3.Build a vertical accordion FAQ section.
- 4.Create a tooltip that appears only when hovered for 2 seconds.
- 5.Make a card that flips to show more info on click.
- 6.Create a pricing table with hover scaling effect.
- 7.Make an image gallery with keyboard navigation.
- 8.Create a countdown timer till tomorrow 12PM.
- 9.Build a to-do list with color-coded priorities.
- 10.Implement a CSS-only dropdown using :focus-within.
- 11.Create a feedback form that shakes on error.
- 12.Build a BMI calculator with category label display.
- 13.Add smooth scroll navigation to internal page links.
- 14.Build a button that disables itself for 5 seconds after clicking.
- 15.Create a drag-and-drop file upload box.
- 16.Create a slider with emoji ratings
- 17.Build a number guessing game with lives system.
- 18.Make a form that reveals more inputs based on dropdown value.
- 19.Build a page loader spinner using only CSS.
- 20.Create a color palette generator with 5 random hex codes.
- 21.Build a floating WhatsApp contact button.
- 22.Make a scroll-to-top rocket animation.
- 23.Create a password strength meter bar with live updates.
- 24.Build a quiz that displays results at the end only.
- 25.Create a simple emoji reaction bar
- 26.Add a hover progress indicator below nav items.
- 27.Create a digital clock with blinking colon separator.
- 28.Build a dark mode with auto switch at 6PM.
- 29.Make a sticky footer that hides on scroll down and shows on scroll up.
- 30.Build a custom dropdown without using <select>.
- 31.Create a time-based greeting ("Good Morning", etc).
- 32.Add a "copy email" button with clipboard API.
- 33.Create a loading bar that fills as the user scrolls down the page.
- 34.Make a random background gradient generator.
- 35.Create an image comparison slider (Before/After).
- 36.Build a credit card input preview UI.
- 37.Add keyboard shortcuts to trigger buttons (e.g. ALT + S to Submit).
- 38.Create a contact form that validates only when all fields are touched.

39. Make a toggleable list/grid product view layout.
40. Build a quiz app where each question disappears after answered.
